

# ABDUL SALAM

AI & ML Engineering Student  
abdulsalam024.main@gmail.com • Bengaluru, India

## PROFILE

AI & ML engineering student focused on building practical software and intelligent systems. Experienced with Python and C fundamentals, web development, React, and project-based problem solving. Interested in AI/ML engineering, software development, automation, and real-world technology products.

## EDUCATION

|                                                                                                                                                                                         |                             |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| <b>BMS College of Engineering</b>                                                                                                                                                       | <b>Current</b>              |
| Engineering — Artificial Intelligence & Machine Learning                                                                                                                                | AI & ML Engineering Student |
| Academic foundation: C programming (1st semester), Python (2nd semester), Artificial Intelligence, engineering fundamentals, and design-thinking project work. 1st-semester SGPA: 6.95. |                             |

## TECHNICAL SKILLS

|                       |                                                                              |
|-----------------------|------------------------------------------------------------------------------|
| <b>Programming</b>    | Python, C                                                                    |
| <b>Web</b>            | HTML, CSS, JavaScript, React                                                 |
| <b>AI / ML</b>        | Artificial Intelligence & Machine Learning fundamentals, intelligent systems |
| <b>Tools</b>          | Git, GitHub, VS Code, Vite                                                   |
| <b>Backend / Data</b> | Node.js, Express, MongoDB, MongoDB Atlas                                     |

## SELECTED PROJECTS

### Community Sports Equipment Library

- HTML • CSS • JavaScript • Design Thinking
- Designed a platform concept connecting students, institutions, and organizations with reusable sports equipment.
  - Built a responsive web interface around equipment discovery, sharing, and student-oriented workflows.

### Flight Reservation System

- Python • Programming Logic
- Developed a reservation workflow covering flight search, passenger information, and booking logic.
  - Focused on structured program flow and practical software problem solving.

### Water Delivery System

- React • Vite • Node.js • Express • MongoDB
- Developed a web-based platform for customer orders, water-service workflows, and delivery management.
  - Implemented a full-stack architecture with a REST API and MongoDB-backed workflows.

### Jarvis

- Python • AI • Automation
- Explored an intelligent personal-assistant interface for useful digital tasks and automation.
  - Designed the project as an extensible foundation for additional intelligent capabilities.

## CAREER OBJECTIVE

To grow into a technically strong AI/ML engineer by combining software engineering fundamentals, machine learning, and practical product development to solve real-world problems.

## CORE STRENGTHS

Problem solving • Project-based learning • Software development • AI/ML exploration • Rapid learning • Practical engineering mindset
